GV-Series Surveillance System is designed to process video, audio, and data from local and remote networked surveillance environment. It utilizes the most advanced digital video compression and processing technologies to generate superior video quality. Since GV-Series solution is PC-based, users can customize their systems for different surveillance needs. The TCP / IP networking capability enables video / audio data to be transferred over the Internet to WebCam, 3G mobile phone, PDA, or GeoVision's remote monitoring applications.

Once configured your Geovision system by WIRED! will give you an entire suite of tools to access your cameras. From live viewing onsite to remote playback offsite, nearly anything is possible with a Geovision system by WIRED!

Geovision POS Capture by WIRED!

POS Capture is the perfect solutions for business owners who want to gain knowledge of what is happening in their business. Retail, restaurant, and bar establishments find this to be the best and sometimes only way to account for customer / employee transactions and interactions.

The combination of audio, video, and text overlay allows you the benefit of virtually being at every register, all day, every day!
